Complete list of all Bootstrap 4 CSS classes with description and examples:

Class	Description	Exam
.active	Adds a white text color to the active link in a **navbar**.	Try i
.active	Adds a blue background color to the active **list item** in a list group	Try i
.active	Adds a dark-blue background color to simulate a "pressed" **button**	Try i
.active	Adds a blue background color to the active **dropdown item** in a dropdown	Try i
.active	Adds a blue background color to the active **pagination** link (to highlight the current page)	Try i
.active	Displays/shows the current **carousel** item	Try i
.alert	Creates an alert message box	Try i
.alert-danger	Red alert. Indicates a dangerous or potentially negative action	Try i
.alert-dark	Dark alert. Dark grey alert box	Try i

Class	Description	Exam
`.alert-dismissible`	Indicates a closable alert box. Together with the `.close` class, this class is used to close the alert (adds extra padding)	Try i
`.alert-heading`	Adds `color:inherit` to the specified element	Try i
`.alert-info`	Teal alert. Indicates a neutral informative change or action	Try i
`.alert-light`	Light alert. Light grey alert box	Try i
`.alert-link`	Used on links inside alerts to provide matching colored links	Try i
`.alert-primary`	Blue alert. Indicates an important action	Try i
`.alert-secondary`	Grey alert. Indicates a "less" important action	Try i
`.alert-success`	Green alert. Indicates a successful or positive action	Try i
`.alert-warning`	Yellow alert. Indicates caution should be taken with this action	Try i

Class	Description	Exam
`.align-baseline`	The element is aligned with the baseline of the parent. This is default	
`.align-bottom`	The element is aligned with the lowest element on the line	
`.align-middle`	The element is placed in the middle of the parent element	
`.align-top`	The element is aligned with the top of the tallest element on the line	
`.align-text-top`	The element is aligned with the top of the parent element's font	
`.align-text-bottom`	The element is aligned with the bottom of the parent element's font	
`.align-content-around`	Align gathered items "around"	
`.align-content-*-around`	Align gathered items "around" on different screens	

Class	Description	Exar
`.align-content-center`	Align gathered items in the center	Try i
`.align-content-*-center`	Align gathered items in the center on different screens	Try i
`.align-content-end`	Align gathered items at the end	Try i
`.align-content-*-end`	Align gathered items at the end on different screens	Try i
`.align-content-start`	Align gathered items from the start	Try i
`.align-content-*-start`	Align gathered items from the start on different screens	Try i
`.align-content-stretch`	Stretch gathered items	Try i

Class	Description	Exam
`.align-content-*-stretch`	Stretch gathered items on different screens	Try i
`.align-items-start`	Align single rows of items from the start	Try i
`.align-items-*-start`	Align single rows of items from the start on different screens	Try i
`.align-items-end`	Align single rows of items at the end	Try i
`.align-items-*-end`	Align single rows of items at the end on different screens	Try i
`.align-items-center`	Align single rows of items in the center	Try i
`.align-items-*-center`	Align single rows of items in the center on different screens	Try i
`.align-items-baseline`	Align single rows of items at the baseline	Try i

Class	Description	Exam
`.align-items-` `*-baseline`	Align single rows of items at the baseline on different screens	Try i
`.align-items-` `stretch`	Stretch single rows of items	Try i
`.align-items-` `*-stretch`	Stretch single rows of items on different screens	Try i
`.align-self-` `start`	Align a flex item from the start	Try i
`.align-self-` `*-start`	Align a flex item from the start on different screens	Try i
`.align-self-` `end`	Align a flex item at the end	Try i
`.align-self-` `*-end`	Align a flex item at the end on different screens	Try i
`.align-self-` `center`	Align a flex item in the center	Try i

Class	Description	Exam
`.align-self-*-center`	Align a flex item in the center on different screens	
`.align-self-baseline`	Align a flex item at the baseline	
`.align-self-*-baseline`	Align a flex item at the baseline on different screens	
`.align-self-stretch`	Stretch a flex item	
`.align-self-*-stretch`	Stretch a flex item on different screens	
`.badge`	Creates a circular badge (grey circle - often used as a numerical indicator)	
`.badge-danger`	Red badge. Indicates a dangerous or potentially negative action	
`.badge-dark`	Dark badge. Dark grey alert box	
`.badge-info`	Teal badge. Indicates a neutral informative change or action	

Class	Description	Exan
`.badge-light`	Light badge. Light grey alert box	Try i
`.badge-pill`	Makes a badge more round	Try i
`.badge-primary`	Blue badge. Indicates an important action	Try i
`.badge-secondary`	Grey badge. Indicates a "less" important action	Try i
`.badge-success`	Green badge. Indicates a successful or positive action	Try i
`.badge-warning`	Yellow badge. Indicates caution should be taken with this action	Try i
`.bg-danger`	Adds a red background color to an element. Represents danger or a negative action	Try i
`.bg-dark`	Adds a dark grey background color to an element	Try i
`.bg-info`	Adds a teal background color to an element. Represents some information	Try i

Class	Description	Exar
.bg-light	Adds a light grey background color to an element	Try i
.bg-primary	Adds a blue background color to an element. Represents something important	Try i
.bg-secondary	Adds a grey background color to an element. Indicates a "less" important action	Try i
.bg-success	Adds a green background color to an element. Indicates success or a positive action	Try i
.bg-warning	Adds a yellow/orange background color to an element. Represents a warning or a negative action	Try i
.blockquote	Styles quoted blocks of content from another source (adds a larger font-size (1.25rem))	Try i
.blockquote-footer	Styles the source title inside the blockquote (light grey text with indentation)	Try i
.border	Adds a border to an element	Try i
.border-bottom-0	Removes the bottom border from an element	Try i

Class	Description	Exan
`.border-danger`	Adds a red border to an element (indicates danger)	Try i
`.border-dark`	Adds a dark border to an element	Try i
`.border-info`	Adds a teal border to an element (indicates information)	Try i
`.border-left-0`	Removes the left border from an element	Try i
`.border-light`	Adds a light grey border to an element	Try i
`.border-primary`	Adds a blue border to an element	Try i
`.border-right-0`	Removes the right border from an element	Try i
`.border-top-0`	Removes the top border from an element	Try i
`.border-secondary`	Adds a grey border to an element	Try i

Class	Description	Exam
`.border-success`	Adds a green border to an element (indicates success)	Try i
`.border-warning`	Adds a orange border to an element (indicates warning)	Try i
`.border-white`	Adds a white border to an element	Try i
`.border-0`	Removes all borders from an element	Try i
`.breadcrumb`	A pagination. Indicates the current page's location within a navigational hierarchy	Try i
`.breadcrumb-item`	Styles list items or links inside the breadcrumb	Try i
`.btn`	Creates a basic button (gray background and rounded corners)	Try i
`.btn-block`	Creates a block level button that spans the entire width of the parent element	Try i
`.btn-dark`	Dark grey button	Try i

Class	Description	Exam
`.btn-danger`	Red button. Indicates danger or a negative action	Try i
`.btn-group`	Groups buttons together on a single line	Try i
`.btn-group-lg`	Large button group (makes all buttons in a button group larger - increased font-size and padding)	Try i
`.btn-group-sm`	Small button group (makes all buttons in a button group smaller)	Try i
`.btn-group-vertical`	Makes a button group appear vertically stacked	Try i
`.btn-info`	Teal button. Represents a neutral informative change or action	Try i
`.btn-light`	Light grey button	Try i
`.btn-link`	Makes a button look like a link (get button behavior)	Try i
`.btn-lg`	Large button	Try i

Class	Description	Exam
`.btn-outline-dark`	Dark grey bordered/outlined button	Try i
`.btn-outline-danger`	Red bordered/outlined button. Indicates danger or a negative action	Try i
`.btn-outline-info`	Teal bordered/outlined button. Represents a neutral informative change or action	Try i
`.btn-outline-light`	Light grey bordered/outlined button	Try i
`.btn-outline-primary`	Blue bordered/outlined button.	Try i
`.btn-outline-secondary`	Grey bordered/outlined button. Indicates a "less" important action	Try i
`.btn-outline-success`	Green bordered/outlined button. Indicates success or a positive action	Try i
`.btn-outline-warning`	Orange bordered/outlined button. Represents warning or a negative action	Try i

Class	Description	Exan
`.btn-primary`	Blue button. Indicates a something important	Try i
`.btn-sm`	Small button	Try i
`.btn-secondary`	Grey button. Indicates a "less" important action	Try i
`.btn-success`	Green button. Indicates success or a positive action	Try i
`.btn-toolbar`	Combine sets of button groups into button toolbars for more complex components	Try i
`.btn-warning`	Orange button. Represents warning or a negative action	Try i
`.card`	Creates a card	Try i
`.card-body`	Container for card content	Try i
`.card-columns`	Container to create a masonry-like grid of cards	Try i
`.card-danger`	Adds a red background color to the card. Represents danger or a negative action	Try i

Class	Description	Exam
`.card-dark`	Adds a grey background color to the card	
`.card-deck`	Container to create a grid of cards that are of equal height and width	
`.card-footer`	Card footer	
`.card-group`	Container to create a grid of cards that are of equal height and width, **without side margins**	
`.card-header`	Card header	
`.card-header-tabs`	Styles navigation tabs inside the card header	
`.card-header-pills`	Styles navigation pills inside the card header	
`.card-img-bottom`	Place the image at the bottom inside a card	
`.card-img-overlay`	Turns an image into a card background. Often used to add text on top of the image	

Class	Description	Exar
`.card-img-top`	Place the image at the top inside a card	Try i
`.card-info`	Adds a teal background color to the card. Represents some information	Try i
`.card-light`	Adds a light grey background color to the card	Try i
`.card-link`	Adds a blue color to any link and a hover effect inside the card	Try i
`.card-primary`	Adds a blue background color to the card. Represents something important	Try i
`.card-secondary`	Adds a grey background color to the card. Represents something "less" important	Try i
`.card-subtitle`	The `.card-subtitle` is used after a `.card-title`, and adds the following to an element: `margin-top: -.375rem; margin-bottom: 0;`	Try i
`.card-success`	Adds a green background color to the card. Indicates success or a positive action	Try i
`.card-text`	Used to remove bottom margins for a p element if it is the last child (or the only one), inside `.card-body`	Try i

Class	Description	Exar
.card-title	Adds a title to any heading element inside the card	Try i
.card-warning	Adds a yellow/orange background color to the card. Represents a warning or a negative action	Try i
.carousel	Creates a carousel (slideshow)	Try i
.carousel-caption	Creates a caption text for each slide in the carousel	Try i
.carousel-control-next	Container for "next" carousel/item link	Try i
.carousel-control-next-icon	Used together with .carousel-control-next to create a "next" icon/button (right-pointed arrow)	Try i
.carousel-control-prev	Container for "previous" carousel/item link	Try i
.carousel-control-prev-icon	Used together with .carousel-control-prev to create a "previous" icon/button (left-pointed arrow)	Try i

Class	Description	Exar
.carousel-indicators	Adds little dots/indicators at the bottom of each slide (which indicates how many slides there is in the carousel, and which slide the user are currently viewing)	Try i
.carousel-inner	Container for slide items	Try i
.carousel-item	Specifies the content of each slide	Try i
.clearfix	Clears floats	Try i
.close	Styles a close icon. This is often used for alerts and modals. Often used together with the × symbol to create the actual icon (a better looking "x"). It floats right by default	Try i
.col-auto	Make form columns automatically size themselves based on their content	Try i
.col-*	Creates a column layout for extra small devices (**and up/all devices**, if not combined with other column classes). The * can be a number between 1 and 12	Try i
.col-sm-*	Creates a column layout for small devices (**and up**, if not combined with other column classes). The * can be a number between 1 and 12	Try i

Class	Description	Exan
.col-md-*	Creates a column layout for medium devices (**and up**, if not combined with other column classes). The * can be a number between 1 and 12	Try i
.col-lg-*	Creates a column layout for large devices (**and up**, if not combined with other column classes). The * can be a number between 1 and 12	Try i
.col-xl-*	Creates a column layout for extra large devices. The * can be a number between 1 and 12	Try i
.collapse	Indicates collapsible content - which can be hidden or shown on demand	Try i
.collapse show	Show the collapsible content by default	Try i
.container	Fixed width container with widths determined by screen sites. Equal margin on the left and right.	Try i
.container-fluid	A container that spans the full width of the screen	Try i
.container-*	Responsive containers	Try i
.custom-	A wrapper/container for custom checkboxes	Try i

Class	Description	Exam
checkbox		
.custom-control	A wrapper/container for custom forms	Try i
.custom-control-input	Customized form control	Try i
.custom-control-inline	Inline (horizontally - side by side) customized form controls	Try i
.custom-control-label	Customized label, when used together with a custom form control	Try i
.custom-file	Customized file upload	Try i
.custom-file-input	Customized file upload	Try i
.custom-file-label	Customized file label	Try i

Class	Description	Exar
`.custom-radio`	A wrapper/container for custom radio buttons	Try i
`.custom-range`	Customized range control	Try i
`.custom-select`	Customized select menu	Try i
`.custom-select-lg`	Large customized select menu	Try i
`.custom-select-sm`	Small customized select menu	Try i
`.custom-switch`	Customized toggle switch	Try i
`.disabled`	Disables a **button** (adds opacity and a "no-parking-sign" icon on hover)	Try i
`.disabled`	Disables a **dropdown** item (adds a grey text color and a "no-parking-sign" icon on hover)	Try i

Class	Description	Exam
`.disabled`	Disables a **pagination** link (cannot be clicked - adds a grey text color and a "no-parking-sign" icon on hover)	Try i
`.disabled`	Disables a **list** item in a list group (cannot be clicked - adds a light grey color and removes the hover effect on list item links)	Try i
`.dropdown`	Creates a toggleable menu that allows the user to choose one value from a predefined list	Try i
`.dropdown-divider`	Used to separate links in the dropdown menu with a thin horizontal border	Try i
`.dropdown-header`	Used to add headers inside the dropdown menu	Try i
`.dropdown-item`	Creates a dropdown item (added to links or buttons inside .dropdown-menu)	Try i
`.dropdown-item-text`	Used to add plain text to a dropdown item, or used on links for default link styling	Try i
`.dropdown-menu`	Adds the default styles for the dropdown menu container	Try i

Class	Description	Exam
`.dropdown-menu-right`	Right-aligns a dropdown menu	Try i
`.dropdown-toggle`	Used on the button that should hide and show (toggle) the dropdown menu	Try i
`.dropleft`	Left-aligns the dropdown	Try i
`.dropright`	Right-aligns the dropdown	Try i
`.dropup`	Indicates a dropup menu (upwards instead of downwards)	Try i
`.d-block`	Creates a block element (adds `display:block`)	Try i
`.d-*-block`	Creates a block element on a specific screen width	Try i
`.d-inline`	Makes an element inline	Try i
`.d-*-inline`	Makes an element inline on a specific screen size	Try i
`.d-inline-`	Makes an element inline block	Try i

Class	Description	Exan
block		
.d-*-inline-block	Makes an element inline block on a specific screen size	Try i
.d-flex	Creates a flexbox container and transforms direct children into flex items	Try i
.d-*-flex	Creates a flexbox container on a specific screen size	Try i
.d-inline-flex	Creates an inline flexbox container	Try i
.d-*-inline-flex	Creates an inline flexbox container on a specific screen size	Try i
.d-none	Hides an element	Try i
.d-*-none	Hides an element on a specific screen size	Try i
.d-table	Makes an element display as a table	Try i
.d-*-table	Makes an element display as a table on a specific screen size	Try i

Class	Description	Exam
.d-table-cell	Makes an element display as a table cell	Try i
.d-*-table-cell	Makes an element display as a table cell on a specific screen size	Try i
.d-table-row	Makes an element display as a table row	Try i
.d-*-table-row	Makes an element display as a table row on a specific screen size	Try i
.embed-responsive	Container for embedded content. Makes videos or slideshows scale properly on any device	Try i
.embed-responsive-16by9	Container for embedded content. Creates an 16:9 aspect ratio embedded content	Try i
.embed-responsive-3by4	Container for embedded content. Creates an 3:4 aspect ratio embedded content	Try i
.embed-responsive-item	Used inside .embed-responsive. Scales the video nicely to the parent element	Try i

Class	Description	Exam
`.fade`	Adds a fading effect when closing an alert box	Try i
`.fade`	Adds a fading effect when showing tab/pill content	Try i
`.fade`	Adds a fading effect when opening a modal	Try i
`.fixed-bottom`	Makes an element stay at the bottom of the screen (sticky/fixed)	Try i
`.fixed-top`	Makes an element stay at the top of the screen (sticky/fixed)	Try i
`.flex-column`	Display flex items vertically	Try i
`.flex-*-column`	Display flex items vertically on different screen sizes:	Try i
`.flex-column-reverse`	Display flex items vertically, reversed	Try i
`.flex-*-column-reverse`	Display flex items vertically, reversed, on different screen sizes	Try i

Class	Description	Exam
`.flex-fill`	Used on flex items to force it/them into equal width columns	Try i
`.flex-*-fill`	Force flex items into equal widths on different screens	Try i
`.flex-grow-0|1`	Used on a single flex item to take up the rest of the available space	Try i
`.flex-nowrap`	Don't wrap flex items	Try i
`.flex-*-nowrap`	Don't wrap items on different screens	Try i
`.flex-shrink-0|1`	Used on a single flex item to shrink it if necessary	
`.flex-row`	Display flex items horizontally (side by side)	Try i
`.flex-*-row`	Display flex items horizontally on a specific screen size	Try i
`.flex-row-reverse`	Display flex items right-aligned and horizontally	Try i

Class	Description	Exar
`.flex-*-row-reverse`	Display flex items right-aligned and horizontally on a specific screen size	Try i
`.flex-wrap`	Wrap flex items	Try i
`.flex-*-wrap`	Wrap items on different screens	Try i
`.flex-wrap-reverse`	Wrap flex items, in reversed order	Try i
`.flex-*-wrap-reverse`	Wrap flex items, in reversed order on different screens	Try i
`.float-left`	Floats an element to the left	Try i
`.float-*-left`	Floats an element to the left on different screens	Try i
`.float-none`	Remove floats from an element	Try i
`.float-right`	Floats an element to the right	Try i

Class	Description	Exar
`.float-*-right`	Floats an element to the left on different screens	Try i
`.font-italic`	*Italic* text	Try i
`.font-weight-bold`	Bold text	Try i
`.font-weight-bolder`	**Bolder** text (font-weight:bolder)	Try i
`.font-weight-light`	Light weight text (font-weight:300)	Try i
`.font-weight-lighter`	Lighter weight text (font-weight:lighter)	Try i
`.font-weight-normal`	Normal text (font-weight:400)	Try i
`.form-check`	Container for checkboxes. Adds proper padding	Try i
`.form-check-`	Makes checkboxes appear on the same line (horizontally)	Try i

Class	Description	Exar
`inline`		
`.form-check-input`	Styles checkboxes with proper margins	Try i
`.form-check-label`	Ensures proper margins for labels used together with checkboxes	Try i
`.form-control`	Used on input, textarea, and select elements to span the entire width of the page and make them responsive	Try i
`.form-control-file`	Adds `display:block` and `width:100%` to input filed with type="file"	Try i
`.form-control-lg`	Large form control	Try i
`.form-control-plaintext`	Styles a form control as plain text	Try i
`.form-control-range`	Adds `display:block` and `width:100%` to input filed with type="range"	Try i

Class	Description	Exam
`.form-control-sm`	Small form control	Try i
`.form-group`	Container for form input and label	Try i
`.form-inline`	Makes a <form> left-aligned with inline-block controls (This only applies to forms within viewports that are at least 768px wide)	Try i
`.form-row`	Container for responsive columns (less left and right margins than `.row`/overrides default column gutters)	Try i
`.h1 - .h6`	Makes an element look like a heading of the chosen class (h1-h6)	Try i
`.h-25`	Sets the height of an element to 25%	Try i
`.h-50`	Sets the height of an element to 50%	Try i
`.h-75`	Sets the height of an element to 75%	Try i
`.h-100`	Sets the height of an element to 100%	Try i

Class	Description	Exam
`.img-fluid`	Responsive image (adds max-width:100% and height:auto)	Try i
`.img-thumbnail`	Shapes an image to a thumbnail (thin light grey borders)	Try i
`.initialism`	Displays the text inside an `<abbr>` element in a slightly smaller font size	Try i
`.input-group`	Container to enhance an input by adding an icon, text or a button in front or behind the input field as a "help text"	Try i
`.input-group-append`	Input group container for adding help text behind an input field	Try i
`.input-group-lg`	Large input group	Try i
`.input-group-prepend`	Input group container for adding help text in front of an input field	Try i
`.input-group-sm`	Small input group	Try i
`.input-group-`	Styles the specified help text in an input group	Try i

Class	Description	Exar
text		
.input-lg	Large input field	Try i
.input-sm	Small input field	Try i
.invalid-feedback	Creates a custom validation message used in validated forms (red text color)	Try i
.invalid-tooltip	Creates a custom validation message used in validated forms (red tooltip)	Try i
.invisible	Make an element invisible	Try i
.is-invalid	Validates a form element (adds a red border to input fields). Note: for server side	Try i
.is-valid	Validates a form element (adds a green border to input fields). Note: for server side	Try i
.jumbotron	Creates a padded grey heading/box with rounded corners that enlarges the font sizes of the text inside it. Used for calling extra attention to some special content or information	Try i

Class	Description	Exam
`.jumbotron-fluid`	Creates a full-width jumbotron (grey padded heading) without rounded borders	
`.justify-content-*`	Aligns flex items from the **start**, at the **end**, **centered**, in **between** and "**around**"	
`.justify-content-*-around`	Aligns flex items "around" on different screen sizes	
`.justify-content-*-between`	Aligns flex items in "between" on different screen sizes	
`.justify-content-*-center`	Aligns flex items in the center on different screen sizes	
`.justify-content-*-end`	Aligns flex items at the end on different screen sizes	
`.justify-content-*-start`	Aligns flex items from the start on different screen sizes	

Class	Description	Exan
`.lead`	Increase the font size and line height of a paragraph	Try i
`.list-group`	Creates a bordered list group for `<li>` elements	Try i
`.list-group-flush`	Removes some borders and rounded corners from list items in a list group	Try i
`.list-group-horizontal`	Display list items horizontally instead of vertically (side-by-side instead of on top of each other)	Try i
`.list-group-horizontal-*`	Display list items horizontally instead of vertically on different screen sizes	Try i
`.list-group-item`	Added to each `<li>` element in the list group	Try i
`.list-group-item-action`	Added to links inside the list group to make them stand out on hover (darker background)	Try i
`.list-group-item-danger`	Red background color for a list item in a list group	Try i
`.list-group-`	Dark grey background color for a list item in a list group	Try i

Class	Description	Exan
item-dark		
.list-group-item-info	Light-blue background color for a list item in a list group	Try i
.list-group-item-light	Light grey background color for a list item in a list group	Try i
.list-group-item-primary	Blue background color for a list item in a list group	Try i
.list-group-item-success	Green background color for a list item in a list group	Try i
.list-group-item-warning	Yellow background color for a list item in a list group	Try i
.list-inline	Places all list items on a single line (used together with .list-inline-item on each elements)	Try i
.list-inline-item	Places all list items on a single line (used together with .list-inline on the parent element)	Try i
.list-	Removes all default list-style (bullets, left margin, etc.) styling from	Try i

Class	Description	Exam
unstyled	a `<ul>` or `<ol>` list	
.mark	Highlights text: Highlighted text	Try i
.media	Aligns media objects together with content (like images or videos - often used for comments in a blog post etc)	Try i
.media-body	Container for media content	Try i
.modal	Identifies the content as a modal and brings focus to it	Try i
.modal-body	Defines the style for the body of the modal. Add any HTML markup here (p, img, etc)	Try i
.modal-content	Styles the modal (border, background-color, etc). Inside this, add the modal's header, body and footer, if needed	Try i
.modal-dialog-centered	Centers the modal vertically and horizontally within the page	Try i
.modal-dialog-	Adds a scrollbar inside the modal	Try i

Class	Description	Exar
scrollable		
.modal-footer	The footer of the modal (often contains an action button and a close button)	Try i
.modal-header	The header of the modal (often contains a title and a close button)	Try i
.modal-lg	Large modal (wider than default)	Try i
.modal-sm	Small modal (less width)	Try i
.modal-xl	Extra large modal	Try i
.m-# / m-*-#	Responsive margin classes. * can be sm, md, lg or xl. # can be a number between 0 and 5	Try i
.mt-# / mt-*-#	Responsive top margin classes. * can be sm, md, lg or xl. # can be a number between 0 and 5	Try i
.mb-# / mb-*-#	Responsive bottom margin classes. * can be sm, md, lg or xl. # can be a number between 0 and 5	Try i
.ml-# / ml-*-	Responsive left margin classes. * can be sm, md, lg or xl. # can be a number	Try i

Class	Description	Exam
#	between 0 and 5	
.mr-# / mr-*-#	Responsive right margin classes. * can be sm, md, lg or xl. # can be a number between 0 and 5	Try i
.mx-# / mx-*-#	Responsive left and right margin auto (horizontal) classes. * can be sm, md, lg or xl. # can be a number between 0 and 5	Try i
.my-# / my-*-#	Responsive top and bottom margin auto (vertical) classes. * can be sm, md, lg or xl. # can be a number between 0 and 5	Try i
.mx-auto	Centers an element horizontally	Try i
.nav nav-tabs	Creates a tabbed menu	Try i
.nav nav-pills	Creates a pill menu	Try i
.nav-justified	Justifies tab/pill links with an equal width	Try i
.navbar	Creates a navigation bar	Try i

Class	Description	Exar
.navbar-nav	Container for navigation links inside the .navbar container	Try i
.navbar-brand	Added to a link or a header element inside the navbar to represent a logo or a header	Try i
.navbar-collapse	Collapses the navbar (hidden and replaced with a menu/hamburger icon on mobile phones and small tablets)	Try i
.navbar-expand-*	Responsive collapsible class - stacks the navbar vertically on small (sm), medium (md), large (lg) or extra large (xl) screens	Try i
.navbar-dark	Adds a white text color to all links in the navbar	Try i
.navbar-light	Adds a black text color to all links in the navbar	Try i
.navbar-text	Vertically align any elements inside the navbar that are not links (ensures proper padding)	Try i
.navbar-toggler	Styles the button that should open the navbar on small screens. Automatically styled as a hamburger/three bars	Try i
.nav-link	Used to style links/anchors inside the navbar	Try i

Class	Description	Exan
`.nav-item`	Used to style list items inside the navbar	Try i
`.needs-validation`	Adds validation styles to a submitted form	Try i
